

AWA Record Store

Il s'agit d'un projet fictif sur le thème "Record Store" donc un Magasin de vente de vinyl qui mettrait en ligne son stock et ces arrivages. Le site est responsive.

Code

Liste des arrivages

Le composant générant cette liste est appelé dans home et est paramétrable selon le genre musical

```
<!-- Listes des arrivages par genre -->
<div class="cards-list">
  <div class="max-w-2xl mx-auto px-4 xs:py-14 sm:py-12 sm:px-6 lg:max-w-7xl lg:px-8">
    <div class="list-container reveal fade-right">
      <h2 class="mt-5 mb-5 text-3xl pt-6 text-left title">Arrivages Jazz
      <font-awesome-icon class="logo" size="2x" icon="music" />
      </h2>
      <ArrivalCardsList genre="Jazz"/>
    </div>
  </div>

  <div class="max-w-2xl mx-auto px-4 xs:py-14 sm:py-12 sm:px-6 lg:max-w-7xl lg:px-8">
    <div class="list-container reveal fade-left">
      <h2 class="mb-5 text-3xl text-left title">Arrivages Rap & Hip-Hop
      <font-awesome-icon class="logo" size="2x" icon="music" />
      </h2>
      <ArrivalCardsList genre="Rap"/>
    </div>
  </div>
</div>
```

Les données sont stockées en json

```
[
  {
    "id": 1,
    "name": "2 Hot!",
    "artist": "Peaches & Herb",
    "pressInfos": "USA - 1978",
    "imageFileName": "1.jpg",
    "label": "Polydor",
    "songs" : {
      "1": "We've Got Love",
      "2": "Shake Your Groove Thing",
      "3": "Reunited",
      "4": "All Your Love (Give It Here)",
      "5": "Love It Up Tonight",
      "6": "Four's A Traffic Jam",
      "7": "The Star Of My Life",
      "8": "Easy As Pie"
    }
  },
]
```

Elles sont ensuite chargées depuis le composant de liste selon le genre passé en paramètre.

```
import ArrivalCard from './ArrivalCard.vue'
import ArrivalJazz from '../../data/ArrivalJazz.json'
import ArrivalRap from '../../data/ArrivalRap.json'

export default {
  name: 'ArrivalCardsList',

  props: {
    genre: String
  },

  components: {
    ArrivalCard,
  },

  data(props) {
    //Choose the source of the list depending on the parameter
    if(props.genre == "Jazz"){
      return {
        arrival_list: ArrivalJazz,
      }
    }

    if(props.genre == "Rap"){
      return {
        arrival_list: ArrivalRap,
      }
    }
  },
}
```

Pour chaque enregistrement du json, est généré un composant card

```
<template>
  <div class="grid grid-cols-1 gap-y-10 sm:grid-cols-2 gap-x-6 lg:grid-cols-4 xl:grid-cols-5 xl:gap-x-8">
    <template v-for="arrival in arrival_list" :key="arrival.id">
      <div class="group">
        <arrival-card
          :id="arrival.id"
          :genre="genre"
          :name="arrival.name"
          :artist="arrival.artist"
          :pressInfos="arrival.pressInfos"
          :imageSource="arrival.imageFileName"
          :label="arrival.label"
          :songs="arrival.songs"
        ></arrival-card>
      </div>
    </template>
  </div>
</template>
```

Chaque card affiche les informations du vinyl

```
<template>
  <div class="w-full aspect-w-1 aspect-h-1 rounded-lg overflow-hidden xl:aspect-w-7 xl:aspect-h-8">
    <div class="card">
      <div class="card-content">
        <div class="card-front">
          
        </div>
        <div class="card-back">
          <strong class="card-text">{{ artist }}</strong>
          <h2 class="card-text">{{ label }}</h2>
          <h2 class="card-text">{{ pressInfos }}</h2>

          <button id="show-modal" @click="showModal = true">
            <font-awesome-icon class="back-icon" size="2x" icon="info-circle" />
          </button>
        </div>
      </div>
    </div>
  </div>
  <h3 class="mt-4 text-lg card-title">
    {{ name }}
  </h3>

  <!-- use the modal component, pass in the prop -->
  <transition name="modal">
```
